## Introduction and data

The 2022 Gender Study is the seventh annual report into the participation and representation of women across all ECPR activities, operations and leadership.

While this Study is designed to allow comparison of data between years, it must be noted that the data for 2020 and 2021 - particularly regarding event participation - will have been influenced by the ongoing Covid-19 pandemic.

For example, with the exception of the February 2020 Winter School, all events in 2020 and 2021 took place online. This format presented a new opportunity for engagement for some, or a potential barrier to participation for others, so the event participation data may reflect this.

Likewise, the move to online teaching and home-based working may have provided some with the space and time to increase productivity. However, for others who found themselves juggling significant caring responsibilities, it would have likely had the opposite effect - this too may be apparent in the submissions to our journals or participation in our events.

Notwithstanding the above, as in previous years, the Study is divided into the following sections:

## 1. Grassroots participation

There are many ways in which members of the political science community can interact with ECPR throughout the course of a year. These include submitting to, publishing in, and carrying out reviews for our journals and book series; presenting a paper at either the Joint Sessions or General Conference; or attending a course at either our Summer or Winter Methods School.

As an organisation, ECPR has no direct influence over these roles. For example, papers are accepted for conferences or journals after a peer review process delegated to other ECPR stakeholders; and attendance at a Methods School is open to all.

## 2. Shaping ECPR activities

There is a range of opportunities for members of the community to take on active roles in which they can influence ECPR activities and projects. This includes convening a Section or Workshop at the General Conference or Joint Sessions; taking a leadership role in the Methods School as an Instructor or Teaching Assistant; or serving as an Editor or Editorial Board Member on one of our journals or book series. These are roles appointed by ECPR, often as a result of a competitive selection process.

## 3. High-profile participation and recognition

Every year we invite scholars to deliver lectures or to participate in roundtables at our events. ECPR also awards prizes to those who have made an outstanding contribution to a particular area of research or to the discipline in general. Lecture givers at in-person Joint Sessions and General Conference are normally invited by our partner host institution. Prizes are all subject to an open and competitive call. They undergo a rigorous evaluation process by juries chaired by a member of the Executive Committee and comprising other, invited members of the scholarly community.

## 4. Governance and operations

All ECPR governance roles are elected positions. The Executive Committee and Speaker of Council are elected by Official Representatives (ORs). Standing Group and Research Network Steering Committee Members are elected by their group membership. ORs are appointed by their university to represent its interests on Council, and to share information about ECPR activities and membership benefits. Also in this section is ECPR's operational management; its leadership team, and staff members across departments.

## Collecting and processing the data

Data relating to event participation and some other areas of interaction with the organisation have been drawn from the MyECPR database, where users are invited to identify their gender in their profile.

From 2020, data have been extracted from the system in a slightly different way from previous years. This has led to some very small discrepancies between total numbers and percentages in data previously reported.

Figures from 2016 onwards have been corrected in the 2020 and 2021 Studies as per the new report. Readers who wish to refer to the old data can do so by comparing to the 2019 Study. A similar situation applies with ECPR Press data.

Discrepancies are not significant enough to change overall trends previously reported.

This year's Gender Report omits data prior to 2017. You can find this, where available, in the 2019 Study.

If users have not registered their gender, or have chosen not to specify, these groups are identified as 'unknown' and 'undisclosed', respectively.

Data relating to publishing trends have been collected by the respective editorial teams through online peer review platforms and their own administrative systems, and then reported annually to our Publications Subcommittee. Where differences in how data are collected exist between publications, we have noted it.

Readers should also bear in mind that data presented at the annual Publications Retreat in March each year are not always definitive, because final decisions
on submitted manuscripts in that period have not always been made by this point.

Finally, the data do not reflect the full life cycle of a journal article because it can take more than 12 months to process submissions through to final decision. Authors counted in 'submissions' are, therefore, not always the same authors counted in 'published' in that given year. An appendix to our 2022 Annual Report includes richer data for all journals.

Other data, such as prize recipients and Editors of publications, are either already published at ecpr.eu or, as with members of Standing Group and Research Network Steering Committees Convenors, held in our administrative systems.

All data are collected, stored, and processed in line with ECPR's Privacy Policy.

## Summary of data, and comparisons with 2021

# Findings from 2022 show great improvements in certain areas on last year's data. Under each section below is the target set in the Gender Equality Plan, and the progress made in 2022 against that 

## Events

The Gender Study reviews the number of women acting as Section Chairs and Workshop Directors, and presenting Papers at the Joint Sessions and General Conference. Previous studies have shown a smaller percentage of women taking on leadership roles at these events compared with attending to present a Paper. Our Gender Equality Plan (GEP) therefore sets targets to address this imbalance.

During the pandemic years of 2020 and 2021, the Joint Sessions took place fully virtually. The 2022 event was therefore the first in-person event for three years.

At the 2022 Joint Sessions, grassroots attendance figures stood at 51\% female. This represents a slight (1\%) proportional rise on the previous year, and a return to the 2021 figure, when the event was online only.

The percentage of female Workshop Directors at the in-person 2022 event enjoyed a rise of $8 \%$ in female participation on the previous year's figure, bringing the total percentage to a very healthy $63 \%$.

At the General Conference, female participation in 2022 at grassroots level was $2 \%$ down on the previous year, from 51\% to $49 \%$. However, this figure remains near enough to parity that it is not cause for serious concern, and does not necessarily represent a downward trend.

Female participation as Section Chairs at the General Conference stood at 51\% in 2021 but in 2022 had risen 1\%, to 52\%. It is reassuring to see that the proportion remains above half, in line with Gender Equality Plan targets.

## Events: Gender Equality Plan targets $\odot$ and actions $\rightarrow$

- To create a more equal gender distribution of Workshop Directors at the Joint Sessions and of Section Chairs at the General Conference
$\Rightarrow$ Based on 2022 data, the efforts of the GEP have been successful. Parity was exceeded at both events, and Joint Sessions figures in particular were extremely encouraging.
© To create a more equal gender balance of speakers at plenary events of the Joint Sessions of Workshops and the General Conference
$\Rightarrow$ In 2022, the Joint Sessions Stein Rokkan lecturer was male. Women were represented on all four 2022 General Conference Roundtables. Overall female representation, however, was up a whopping 32\% on the previous year, at a resounding $78 \%$ of Roundtable panellists.
$\Rightarrow$ Six House Series talks took place in 2022. Across all events, 11 speakers were female and nine male, resulting in an overall percentage of $55 \%$ female speakers.

## Training

This Study reviews the number of women attending the Winter and Summer Schools as participants, and leading the event as an Academic Convenor, Instructor or Teaching Assistant. Previous studies have shown that while women are better represented than men at the Methods School as participants, they are underrepresented in all leadership roles associated with the event - the Gender Equality Plan therefore seeks to address this imbalance.

In 2022, 59\% of participants across the Winter and Summer School were women. Happily, this constitutes a significant $16 \%$ rise on the previous year's figure.

In 2022, female Winter School Instructors rose from $30 \%$ to $36 \%$, while the percentage of women teaching at the Summer School was very similar, at 35\%.

Female representation at Teaching Assistant level is also encouraging. At the Winter School, 50\% of TAs were female in 2022 (up $3 \%$ on the previous year), while at the Summer School the figure was 60\% - up 6\% from 2020.

At Instructor level, overall female participation across the combined Methods School rose 5\% between 2021 and 2022, from $31 \%$ to $36 \%$. Among Teaching Assistants, however, the figure rose $6 \%$, from $50 \%$ to $56 \%$ - our highest-ever figure.

## Training: Gender Equality Plan target $\odot$ and action $\rightarrow$

- To increase the proportion of female Academic Convenors and Methods School Instructors.
$\Rightarrow$ A call for two new Methods School Academic Convenors encouraged female applicants, and we are happy to report that gender parity was achieved, with one female and one male appointee.
$\Rightarrow$ The rise to $59 \%$ in female participation across the Winter and Summer events is extremely encouraging and suggests that the disappointing 2021 figure was an anomaly rather than indicative of a trend.

## Publishing

A key area of improvement in women's representation is across the Editorial Boards of ECPR journals. From 2017-2020 we saw incremental increases from 47\% to 54\%. This figure dropped 1\% in 2021 and fell another 3\% in 2022. However, it still stands at $50 \%$, so is not yet cause for concern.

Since the 2018 Publications Retreat, all editorial teams have been working on cross-publication initiatives to increase the numbers of women submitting to, and being published in, our journals and book series.

The percentage of submissions by women across all journals remained static on the previous year, at 32\%. There was a slight rise in the percentage of published articles by a female author, up from $33 \%$ to $34 \%$.

All editorial teams began working on ways to improve the gender balance of reviewers after the 2019 Publications Retreat. We now have data on those scholars who agreed to review an article for 2018-22.

While there was an initial increase in women carrying out this role 2018-2019 ( $27 \%$ to $34 \%$ ), the figure fell slightly to
$30 \%$ in 2020 , but was up $3 \%$ in 2021 , at $33 \%$. In 2022, it stood at a far healthier $39 \%$; a $6 \%$ rise on the previous year.

The number of overall submissions across the portfolio leapt dramatically in 2022, from 814 in 2021, to 1,718 , putting significant pressure on our editorial teams.

Publications: Gender Equality Plan targets $\odot$ and actions $\rightarrow$
© To achieve gender balance among editors of journals by the end of 2020
$\Rightarrow$ As at the end of 2022, this target is close to being achieved. Across the full publishing programme, the figure is up $4 \%$ on 2021, and now stands at $47 \%$. While there is not an equal gender balance on each publication (the PDY, notably, remains all male), the picture across the portfolio is positive, and improving.
© To establish a gender balance among reviewers of articles submitted to journals by the end of 2020
$\Rightarrow$ The percentage of women reviewers rose $6 \%$ in 2022 , to $39 \%$. This is encouraging, though there remains some way to go to achieve parity. Editorial teams are aware of the need for positive discrimination in this area, yet they remain mindful of the extra burden of work reviewing brings, particularly where women are underrepresented in a particular field.

## Prizes

In 2022 we conferred eleven prizes. The percentage of women nominated across all prizes rose to $43 \%$, up $2 \%$ on 2020. However, only two prizes were awarded solely to women: Stein Rokkan and Political Theory. Two further prizes, the Lifetime Achievement Award and the Dirk BergSchlosser Prize, were awarded jointly to one male and one female winner.

## Prizes: Gender Equality Plan target $\odot$ and action $\rightarrow$

- To achieve a more equal gender distribution of prizewinners, in particular for the Stein Rokkan Prize, Lifetime Achievement Award and Hedley Bull Prize
$\Rightarrow 2022$ data show that the percentages of nominations for women decreased for the Stein Rokkan, Rudolf Wildenmann and Political Theory prizes, though they increased for the Jean Blondel, Hedley Bull, Lifetime Achievement and Rising Star prizes. The average total female nominations across all prizes, however, was up 2\% on 2021 , at $43 \%$.

The picture for total prizes awarded is very disappointing, with only $30 \%$ conferred on women. That's a $30 \%$ drop on the previous year's $60 \%$ - but this must be taken in the context of an extremely small sample size.

## Governance

The election process for the 2021-2024 EC cohort opened in October 2020, concluding in February 2021.

## Governance: Gender Equality Plan target $\odot$ and action $\rightarrow$

© To appoint a higher proportion of women to the Executive Committee
$\Rightarrow$ At the most recent election, new rules applied, and we ran parallel ballots for female and male candidates. Three members of each gender were subsequently elected, finally enabling the EC to reach gender parity.
$\Rightarrow$ The same rules will apply for the election of the 2024 cohort.

## Staffing and operational leadership

The area in which women outnumber men most significantly is in the operational leadership at ECPR HQ. The appointment of Tanja Munro as Director in September 2019, along with a redistribution of roles on the Management Group, led to a composition of four women and one man. Overall, ECPR staffing remains at 57\% women / other.

## Our next steps

While we should be justifiably proud of our achievements in many aspects of our work, but particularly in the field of Events, there remains much room for improvement.

The extremely mixed picture on nominations and awards of ECPR Prizes will require careful monitoring to ensure that these figures do not develop in the same direction year on year.
The figures for submissions, reviewers
and published authors across our entire journals portfolio, and on The Loop, remain stubbornly below parity.

This is, however, an area in which we can have limited external influence, though The Loop has initiated a policy of commissioning only female authors to counteract the disproportionate percentage of cold pitches from male authors, and impressing upon series Editors the importance of gender balance..

|  | Percentage of women in each category |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## 1. Grassroots participation

## a. MyECPR account holders

We measure basic engagement by the number of active MyECPR accounts held by men versus women. Anyone participating in an ECPR event, or signing up to an email list, must have an account. This data, if limited to accounts accessed in the current year, therefore gives a sense of the size of the
active ECPR community. The total number of active users increased significantly on last year, up from 16,298 to 27,559 - a rise of 11,261 . The percentage of active female account holders fell very slightly, to 49\%, though the gender distribution of our account holders has remained pretty evenly
balanced year on year since 2019.
The percentage of female users at non-Member institutions rose by $2 \%$.

It is significant that the number of users identifying as 'other' rose fourfold, from only two in 2020 and 2021 to 8 in 2022.

|  | MyECPR account holders |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2017 |  |  | 2018 |  |  | 2019 |  |  | 2020 |  |  | 2021 |  |  | 2022 |  |  |
|  | $\begin{aligned} & \stackrel{n}{0} \\ & \text { y } \\ & \overline{3} \end{aligned}$ |  |  | $\begin{aligned} & \frac{n}{0} \\ & \text { y } \\ & \underline{3} \\ & \overline{4} \end{aligned}$ |  |  | $\begin{aligned} & \frac{n}{4} \\ & \text { M } \\ & \overline{3} \end{aligned}$ |  |  | $\begin{aligned} & \text { n } \\ & \text { in } \\ & \text { y } \\ & \overline{<} \end{aligned}$ |  |  | $\begin{aligned} & \frac{n}{む} \\ & \ddot{y} \\ & \text { 『 } \end{aligned}$ |  |  | $\begin{aligned} & \frac{n}{2} \\ & \text { y } \\ & \overline{3} \end{aligned}$ |  |  |

## b. Authors submitting to, and publishing in, journals and book series

## Publishing in our journals

Data on the number of women submitting to, and being published in, our journals offer useful insight into women's representation at this stage of the research cycle. Data for 'submitted' and 'published' articles relate to articles submitted to, and published, during 2022. Because of the time between article submission and publication, the cohort of submitted versus published authors is likely to differ to some degree.

Differences exist in how journals report gender composition of authors. EJPR and EPSR report lead / submitting
author only; EPS and PRX record all article authors. We do not currently look at how women are submitting to our journals for example, whether as single authors or part of teams, and, if so, whether those teams are of mixed or single gender. After a year-on-year increase since 2017, 2021 saw a drop in the number of articles submitted across all journals, to 184. However, this number more than doubled in 2022, to 1,718 .

Following an encouraging rise in female contributors to PDY in 2021, the figure has experienced a significant 10\% drop, to $32 \%$; clearly, an area for concern. On $P R X$ the picture is far more optimistic, with
female submissions rising 4\%, to 46\%. EPS and EPSR both recorded fairly disappointing submission rates from female authors, though EPS did succeed in achieving gender parity for its reviewers.

The picture was mixed in terms of articles published. EJPR, PDY and EPS all recorded a drop in the number of female-authored publications. EPSR, however, saw a marked rise of $11 \%$, from $25 \%$ to $36 \%$, while PRX recorded a rise of $6 \%$.

Across the portfolio, the proportion of female reviewers climbed a healthy 6\%, to $39 \%$ - though we will continue to strive to achieve parity in this area, too.

Publishing in books

OUP Comparative Politics series, and ECPR Press
We currently collect data only on the number of women being published across the ECPR Press and Comparative Politics
series, but not on submissions. Given that only a small number of books are published in the Comparative Politics series in particular, percentages can vary wildly year on year. Taking both outlets together, though, the percentage of books published in 2022 with a female author or editor sits at 75\%.

Of the 70 books published since 2017, authorship breaks down as follows:

Co-authored / edited: all male 19 or $27 \%$ Co-authored / edited: all female 4 or $6 \%$ Co-authored / edited: mixed 15 or $21 \%$ Single-author / editor: male 21 or $30 \%$ Single-author / editor: female 11 or $16 \%$

## c. Participation at events

Participation in ECPR events is a valuable indicator of how different groups of people are engaging with our organisation.

The Joint Sessions was the first ECPR event to pivot from an in-person to a virtual event when lockdown restrictions came into force in spring 2020. That year, the event recorded a $51 \%$ female attendance rate. In 2021, the JS was fully virtual from the get-go, and attendance figures were split exactly 50:50. In 2022, the hybrid event, held partly at Sciences Po in Toulouse, returned this event to its 2020 proportion of $51 \%$ female attendees.

In 2022, our General Conference recorded a $2 \%$ drop in the proportion of female participants, down from $51 \%$ to $49 \%$ though this is not significant enough, nor far enough from parity, to constitute major cause for concern.

The picture on the Methods School is far rosier. The proportion of female participants at our Winter School rose a striking $17 \%$, to 62\%, our highest-ever figure. And female participation at the Summer School jumped 15 percentage points, to $55 \%$, though this remains far short of the record-breaking $63 \%$ in 2020. Looking at trends for each event and in the combined table, it seems that the relatively low proportion of female participation in 2021 was an anomaly, and that rates will continue to remain at 50+\%.

Prior to the pandemic, the percentage of women attending graduate and early career researcher (ECR) events was consistently higher than at the Joint Sessions and General Conference. After the anomalously low 2021 figures, it seems that this is once again the case, with much higher female attendance rates at the Methods School than at either the GC or JS.

## 2. Shaping ECPR activities

## a. Section Chairs and / or Workshop Directors

Workshop Directors and Section Chairs play a key role in shaping the academic programme of the Joint Sessions and General Conference, and therefore, to a certain extent, the agenda for the discipline in that time period. Workshops and Sections are selected by members of the Executive Committee based on a competitive process.

The percentage of female Workshop Directors has shown a steady increase since 2017. In 2020 and 2021, events were fully virtual, and we were unsure whether we would maintain the very healthy figures for female leadership during these two
years. Happily, for the 2022 hybrid event, held largely in Toulouse, the percentage of female Workshop Directors jumped eight points, to its highest ever figure of $63 \%$.

Grassroots female participation at the same event stood at 51\%, so it is extremely heartening to see a higher proportion of women in leadership roles than at grassroots level, for this event at least.

The percentage of women Section Chairs at the General Conference reached a high of $55 \%$ at the 2020 virtual event but had dropped $4 \%$ in 2021, to $51 \%$. At the inperson 2022 event in Innsbruck, however,
we managed to maintain the above-parity figure, coming in at 52\%.

Comparing General Conference participation at grassroots and leadership levels, it is interesting to see that the female percentage is higher for Section Chairs and Co-Chairs. The substantial dataset of more than 2,000 participants at the General Conference means GC figures can be said to reflect most accurately general trends in the profession. So, while it is disappointing that we narrowly failed to achieve parity among grassroots participants, it is most heartening that leadership percentage has remained 50+\% for four successive years.

## b．Methods School Instructors，Teaching Assistants， and Academic Convenors

From 2005－2021，the Methods School was led by three male Academic Convenors．In 2022，two new Convenors were appointed：one female，one male， finally achieving parity．

At Instructor level，the proportion of women remains stubbornly low，though the figure has climbed an encouraging eleven percentage points since 2017.

In 2021，the figure stood at 31\％female representation overall，across Winter and Summer events．Promisingly，the proportion had risen $5 \%$ ，to $36 \%$ ，in 2022 ．Though it remains far from parity，we nonetheless appear to be on an upward trajectory in this category，albeit on a long－term timescale．

Female representation at Teaching Assistant level is far more encouraging，
suggesting there will be more young female scholars who will filter upwards to Instructor level at the years progress．

At the 2022 Winter School，50\％of TAs were female（up 3\％on the previous year）， while the Summer School figure stood at an all－time high of 60\％，up 6\％from 2021. We will aim to maintain these impressive $50+\%$ levels，which are cause for pride．

Shaping events

## c. Editors and Editorial Board members of

 all publicationsEditors of ECPR publications play a high-profile role in the community, shaping the research agenda and profile of the discipline through their day-to-day editorial work and through cross-publication initiatives that aim to develop wider organisation strategies or policies.

In 2022 the percentage of female Editors (including Associate Editors) across all publications rose four percentage points, to $47 \%$.

Every editorial team is relatively gender balanced (PRX is all-female). The exception is the PDY, which remains the one publication with no women on its editorial team.

Our Editors are responsible for the appointment and overall composition of the Editorial Boards of their publications. Significant improvements have been made in this area since 2016. All editorial teams now proactively appoint more women to their boards when vacancies arise.

This year sees a 3\% drop in the overall number of female Editorial Board members across our entire publishing portfolio, though the proportion of women and men is equal.

# 3. High-profile participation and recognition 

## a. House Series, Joint Sessions, and General Conference

Often, the most visible people at an ECPR event are those delivering the Plenary Lecture or taking part in a Roundtable.

To date, the General Conference Plenary Lecture has been delivered by a woman only once, in 2013. We are currently in discussions as to whether to continue
including plenary speakers at our General Conference. Prior to 2021, the Joint Sessions Stein Rokkan Lecture was given by a female speaker only twice, in 2017 and 2019. The 2021 Stein Rokkan Lecture took the form of a Roundtable-style discussion, consisting of three female and three male panellists.

In 2021, five GC roundtables were scheduled, across which 12 of the 26 panellists, or $46 \%$ of speakers, were female. In our House Series, the first of 2021 was delivered by Veronica Anghel, winner of ECPR's inaugural Rising Star Award. The second, in April, was given jointly by a male and female speaker.

| House Series | 2020 | 2021 | 2022 |

## b. Prize nominees and recipients

ECPR awards a number of prizes each year to recognise and celebrate achievement across the discipline and scholarly career path. Prizes are awarded for papers presented at events, articles and books published, outstanding PhD theses written,
excellence in teaching at our Methods School, and for general career achievement.

In 2022 we awarded eleven prizes. Of the nominations received, 43\% were for women (up 2\% from 2021). Only two prizes were
awarded solely to women: the Stein Rokkan and Political Theory prizes. Two prizes were awarded jointly to a woman and a man: the Dirk Berg-Schlosser Award, and the Lifetime Achievement Award, given jointly to Beate Kohler-Koch and Jean Blondel.

## 4. Governance and operations

## a. Executive Committee members

The ECPR's Executive Committee (EC) is its Board of Trustees. The EC has ultimate responsibility for running the organisation. Our twelve EC members each serve a six-year term. Election is staggered every three years.

Any scholar from an ECPR Full Member institution can nominate themselves for election. They must then receive sufficient
endorsements from Official Representatives to go forward to the final ballot, in which all ORs are invited to vote.

The 2018-2021 EC comprised five women and seven men - the highest proportion of women since ECPR's founding. When Oddbjørn Knutsen sadly passed away in 2019, he was replaced by Hana Kubátová, the candidate with the next-highest
number of votes from the 2018 election.

The election process for the next EC cohort opened in October 2020, concluding in February 2021. At this election the new rules applied, and we ran two parallel ballots for female and male candidates. Three members of each gender were subsequently elected, finally enabling the EC to reach gender parity.

| Executive <br> Committee | $2000-$ <br> 2003 | $2003-$ <br> 2006 | $2006-$ <br> 2009 | $2009-$ <br> 2012 | $2012-$ <br> 2015 | $2015-$ <br> 2018 | 2018- <br> $2021^{*}$ | $2021-$ <br> 2024 |

| Female | 2 | 3 | 3 | 3 | 3 | 3 | $4(5)$ | 6 |
| Male | 10 | 9 | 9 | 9 | 9 | 9 | $8(7)$ | 6 |

*Hana Kubátová replaced Oddbjørn Knutsen in September 2019

## b. Speaker of Council

The post of Speaker of Council was established in 2013. It is the liaison point between the Executive Committee and

ECPR's Council of Official Representatives. David Farrell held the post from 2013-2017. In 2018, Thomas Poguntke was elected
as a result of an open call and election, to which there were no female candidates.

## c. Official

## Representatives

Each member institution appoints an Official Representative (OR) as a key point of contact between their university and ECPR. ORs act as figureheads for ECPR membership within their institution. The OR also has a seat on Council. The percentage of ORs of known gender has dropped by $3 \%$ for the past two years, down from 35\% in 2020 to 32\% in 2022.

| Official <br> Representatives | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ | $\mathbf{2 0 1 9}$ | $\mathbf{2 0 2 0}$ | $\mathbf{2 0 2 1}$ | $\mathbf{2 0 2 2}$ |

| \% female, of known gender | $38 \%$ | $39 \%$ | $36 \%$ | $35 \%$ | $34 \%$ | $32 \%$ |

## d. Standing Group / Research Network Steering Committees

Under ECPR's auspices sit more than 50 thematic groups, covering a broad and diverse range of topics and sub-fields of political science. These Standing Groups and Research Networks have their own memberships and activities, including events and publications. They are vital for nurturing and developing all corners of
the discipline, helping to ensure that ECPR remains a fully inclusive, broad church.

Each group is governed by a Steering Committee, on which one member acts as Chair, overseeing the running of the group and serving as a liaison point with the Executive Committee and ECPR staff.

Steering Committee members enjoy a high-profile, influential position allowing them to shape and steer ECPR's work broadly, and their field of research specifically. In 2022, 51\% of all Steering Committee members of known gender were female. This is down $3 \%$ on 2021, but remains above parity.

| Standing Group Convenors / <br> Steering Committee Members / Chairs | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| \% female of known gender | 45\% | 50\% | 52\% | 52\% | 54\% | 51\% |

## e. ECPR staff and operational management

ECPR's administrative offices are based in Colchester, Essex, in the East of England. Staff are responsible for the delivery of all ECPR activities and services, and are organised across four departments, each headed by a Manager who sits on the Management Group, chaired by
the Director. In 2022, ECPR employed 23 members of staff, of whom 12 were women, and one non-binary. There was a strong bias towards women in the departments of Events and Communications, which employed only one man during the period 2016-
2021. Over that same period, all members of the IT department were male.

Since 2019, ECPR has been headed up by a female Director, and the Management Group (excluding Director) is comprised of three women and one man.

## Conclusions

## Events

It is encouraging to see grassroots female participation at the Joint Sessions at $51 \%$, but this year's stand-out figure is the hugely impressive 63\% female representation at Workshop Director level.

It's reassuring, too, that the percentage of women acting as General Conference Section Chairs remains above $50 \%$, in line with our Gender Equality Plan targets.

Concerted efforts to make gains in female representation at General Conference Roundtables, and across our new programme of House Series talks, have paid dividends. Happily, it will be easier to maintain healthy female participation across these smaller datasets over which ECPR has greater direct influence.

The slight dip in female participants at grassroots level at the General Conference, while not cause for concern, is something we should keep an eye on going forward.

## Training

A substantial 16\% rise in female participants at both Methods Schools is indeed cause for celebration. It also suggests that the disappointing 2021 figure was an anomaly rather than a trend.

And while we welcome the slight rise in the percentage of female Teaching Assistants, our new Academic Convenors will need to work especially hard to overcome the persistently low female representation at Instructor level. New female Methods School AC Susana Salgado may help address this disparity.

## Publishing

The most positive story from the 2022 data is the representation at editor level, which has risen to $47 \%$. The percentage of women reviewers had also risen to a healthier 39\%.

Across the portfolio, however, the
proportion of women submitting and reviewing articles, and getting their work published, remained well below target. The Loop has set itself a '50-50 challenge' - a commissioning strategy that aims to achieve gender parity by 2023.

## Prizes

While there was a slight rise in nominations for women across our Prizes portfolio, the percentage of prizes awarded to women recorded a substantial 30\% drop in 2022. This must, however, be taken in the context of a very small sample size.

## Looking ahead

Statistics across our Events and Training portfolios are generally encouraging and exceeded targets in several areas. Yet the longstanding female underrepresentation across the ECPR publishing portfolio is proving a tougher nut to crack. In 2023, our EDI working group will therefore be focusing efforts on initiatives in this field.
